

Abstract

The present invention aims to certainly use an electronic program guide. According to the present invention, a switch circuit part 24 for connecting a first tuner 2 and a second tuners 3 that take in a television signal S2 on plural channels including a program guide providing channel and select one of them, to a first and a second signal processing systems 30 and 31 that perform predetermined processing to the television signal S2, and a VBI slicer 23 that extracts an electronic program guide from the television signal S2 on the program guide providing channel, is controlled so that the first and the second signal processing systems 30 and 31 that simultaneously perform predetermined different processing to the above one television signal S2, are collectively connected to one of the first tuner 2 and the second tuner 3. Thereby, even in the case where predetermined plural different processing is simultaneously performed to one television signal S2, the first or the second tuner 2 or 3 can be kept for selecting the program guide providing channel, and an electronic program guide can be certainly obtained. Thus, a recording/reproducing apparatus capable of certainly using an electronic program can be accomplished.
